

## **CFMM Online MRI Screening Resource Information Sheet**

### **Overview**

The Centre for Functional and Metabolic Mapping (CFMM) integrates secure online MRI screening tools into its core operational workflow. The digitization of MR subject screening forms enhances security and streamlines the screening process, replacing traditional paper-based methods.

### **Secure Access and Authentication**

- Access to the online screening process is restricted to designated study coordinators through valid user identities on Western University's secured Active Directory servers.
- The screening system is embedded within the CFMM Study Management web application, ensuring controlled access and secure handling of sensitive data.

### **Screening Process and Features**

- Coordinators and MR Technologists can securely complete screening forms within the CFMM web application.
- Screening forms can be sent to participants via email using URL tokens, ensuring secure remote access.
- Responses can be reviewed, commented on, and communicated back between coordinators and MR technologists before finalizing screening decisions.
- Participants can be approved or rejected before the scan date based on screening outcomes.
- The entire process is fully digitized, ensuring efficiency and eliminating paper copies.

### **Data Security and Management**

- All screening forms are securely stored within the CFMM system with project-level access control.
- The CFMM upholds Western University's data security standards, ensuring confidentiality and integrity in managing screening data.
